

# DraftAnalyzer Utility

This utility analyzes the folders included in an XML of a job definition, and groups them in sets of folders that have no dependencies with other folders outside the group.

## Running the DraftAnalyzer Utility

The following procedure describes how to run the DraftAnalyzer utility.

### ➤ To run the DraftAnalyzer utility:

1. Extract the draft.xml file and move it to a temporary file:
2. Open a command prompt and go to the directory:  
`<conversion-home>\tools\general\DraftAnalyzer`
3. Type the following command: `DraftAnalyzer.bat`
4. Fill in the **Conversion Draft** field with the name of the file that contains the draft XML file to be analyzed.
5. Fill in the **Report Location** field with the name of the CSV file to be created with the report. If no file name is specified, the report is created in the same directory as the input draft XML, under the name *report.csv*
6. Click on the **Run Dividor** button and wait until the report file is created.
